

Admin and Audience Functionality Report

Project: Rangamadala Drama Connectivity Platform

Date: April 17, 2026

1. Purpose

This report explains the implemented functionalities for the Admin and Audience modules in the Rangamadala system. It is prepared based on controller, model, view, and frontend script behavior.

2. Admin Functionalities

2.1 Secure Admin Access

- Dashboard and admin APIs are protected by login and role checks.
- Only users with role "admin" can access admin operations.

Evidence: app/controllers/Admindashboard.php

2.2 Dashboard Overview and Analytics

- Overview cards: total users, pending user approvals, active dramas, pending drama approvals.
- Charts: registration trend (last months), role distribution.
- Drama pipeline summary: pending, in progress, published, recently updated.

Evidence: app/controllers/Admindashboard.php, app/views/admindashboard.view.php, public/assets/JS/admindashboard.js

2.3 User Verification Management

- View pending registrations for artists and service providers.
- View detailed registration data before decision.
- Approve or reject with reason and verification metadata updates.

Evidence: app/controllers/Admindashboard.php, public/assets/JS/admin-verification.js

2.4 Drama Approval Workflow

- View pending drama creation requests submitted by artists.
- Approve requests to continue drama creation/publish flow.
- Reject requests with reason.

Evidence: app/controllers/Admindashboard.php, public/assets/JS/admin-verification.js

2.5 User Management (CRUD)

- List all non-admin users.
- Add users (artist, audience, service provider).
- Edit user profile details and role.
- Remove users (with protection for admin accounts).

Evidence: app/controllers/Admindashboard.php, public/assets/JS/admin-user-management.js

2.6 Admin Profile Management

- Load logged-in admin profile details.
- Update full name, email, phone, and optional password.

Evidence: app/controllers/Admindashboard.php, public/assets/JS/admindashboard.js

2.7 Website Content Management

- Manage swiper slides (including published drama poster sync).
- Manage gallery images (add/delete).
- Manage testimonials (add/delete, rating value).
- Enable/disable content visibility through status toggles.

Evidence: app/controllers/Admindashboard.php, public/assets/JS/admin-content-management.js

3. Audience Functionalities

3.1 Secure Audience Access and Dashboard

- Dashboard is restricted to logged-in users with role "audience".
- Initial data load includes dramas, categories, bookings, classes, payments, profile image.

Evidence: app/controllers/Audiencedashboard.php

3.2 Audience Dashboard Views

- Views include Dashboard, Browse Dramas, My Showings, Classes, Watched Dramas, Payment History.
- Stats include upcoming dramas, available classes, paid bookings, pending show requests.

Evidence: app/views/audiencedashboard.view.php, public/assets/JS/audiencedashboard.js

3.3 Browse Dramas and Details

- Audience can browse published dramas and open detail pages.
- Search and category filtering improve discoverability.

Evidence: app/controllers/Audiencedashboard.php, app/controllers/BrowseDramas.php, public/assets/JS/audiencedashboard.js

3.4 Show Booking Request Flow

- Audience submits booking request with show date/time, venue, sender and contact details.
- Input validation is enforced for correctness and safety.
- Request status lifecycle supports pending, accepted, rejected, and paid states.

Evidence: app/controllers/BrowseDramas.php, app/models/M_audience_show_booking.php

3.5 Show Payment Integration

- Payment can be initiated only after artist accepts the show request.
- PayHere order and hash generation is used for secure payment start.
- Payment return endpoint finalizes booking payment status.

Evidence: app/controllers/BrowseDramas.php, app/core/PayHereHelper.php, app/models/M_audience_show_booking.php

3.6 Watched Dramas Module

- Bookings are classified into active or watched using payment and date/status rules.
- Audience can open watched drama details for completed experiences.

Evidence: app/views/audiencedashboard.view.php, app/controllers/BrowseDramas.php, app/views/watched_drama_details.view.php

3.7 Ratings and Reviews

- Only audience users can submit ratings.
- Eligibility check requires purchased and watched drama conditions.
- Supports review comments, rating summary, paginated list, and helpful marking.

Evidence: app/controllers/BrowseDramas.php, app/models/M_audience_show_booking.php, app/views/drama_rate_review.view.php, public/assets/JS/drama-ratings.js

3.8 Classes and Enrollment Payments

- Audience can view published classes and enrolled classes.
- Enrollment is payment-first for audience users.
- Class payment order creation, return completion, and enrollment recording are implemented.
- Audience payment history includes completed class payments.

Evidence: app/controllers/Audiencedashboard.php, app/models/M_class.php, app/views/audiencedashboard.view.php

3.9 Audience Profile Management

- View profile, signup details, bio, and profile image.
- Edit profile information and upload profile image with validations.

Evidence: app/controllers/AudienceProfile.php, app/controllers/AudienceProfileEdit.php, app/models/M_audience.php

4. Functional Summary

Admin module handles governance and moderation: approvals, user lifecycle control, analytics, and home content control.

Audience module handles user engagement lifecycle: discover dramas, request showings, pay, track watched dramas, review performances, enroll in classes, and maintain profile.

5. Conclusion

The current implementation supports both operational control (Admin) and end-user experience flow (Audience) with role-based protection, approval gates, and payment-driven workflows.

Generated for project documentation and viva/report explanation purposes.
